

TANKBLANKET™

Winterisation that works!

Welcome to the world of **TankBlanket** winterisation, an exciting and wide ranging system that aids all year round motorhoming and caravanning.

To register your TankBlanket, validate your warranty and find out more about TankBlanket and what the TankBlanket system has to offer please visit www.tankblanket.co.uk

When switched 'On', TankBlanket automatically activates when the contents of your fresh or waste water tank drops to 7 °C and deactivates when the contents reach 18 °C. This keeps your tanks just outside the freeze zone and because TankBlanket cycles on and off automatically, energy consumption is minimised. Switch 'Off' TankBlanket when the ambient temperature remains above freezing or when your Tanks are empty. Please visit www.tankblanket.co.uk for further information, tips and advice, and FAQ's.

TankBlanket is part of an integrated winterisation system. It's modular design facilitates upgrades at anytime making TankBlanket extremely cost effective. TankBlanket is proven to work which gives you piece of mind throughout the year and a fully winterised vehicle adds value when you come to sell. The TankBlanket system also includes PipeBlankets and both Tank and PipeBlankets can be regulated individually or through one central 'intelligent' controller which removes the stress of remembering to switch 'On' the system as temperatures fall. Please visit www.tankblanket.co.uk to view our suggestions on how to improve and get the best from Leisure vehicle winterisation. Why not follow us on our Blog, Facebook and Twitter to share your experiences and learn about developments, offers and competitions? Please contact us at tankblanket.co.uk.
